

SUPPLEMENTAL FIGURE1

Supplemental Figure 1. Expression of FLAG-tagged transmembrane adaptor molecules co-transfected with HA-tagged constructs in COS-7 cells. COS-7 cells were transiently transfected with HA-tagged CD300c and CD300d constructions and/or FLAG-tagged transmembrane adaptor molecules. Forty-eight hours post-transfection cells were subjected to flow cytometry to assess the cell surface expression of the desired molecules. Adaptor polypeptides were stained using anti-FLAG (M2) (white histograms). An isotypic mAb was used as negative control (grey histograms).
